Dear Parents-Carers,

I would like to take this opportunity to express how proud the teachers of science have been with the student’s commitment to their science study across all year groups. In what has been a challenging time for many of the students, embracing new ways of learning the students of The John Roan have risen to challenge completing exemplary work and most importantly communicating regularly with their teachers either via SMHW or directly by email.

I would also like to take this opportunity to thank those of you who have contacted teachers within the department directly to communicate the effectiveness of the lessons being set and to give encouraging feedback to teachers to support the sustained consistency of work your son-daughter is receiving. It is imperative that moving forward that we keep lines of communication open to ensure that your child continues to make progress in their science studies.

For over the Easter holiday students in years 7 to 10 will be given a series of optional mini science projects to partake in, some involving simple, fun experiments that can be completed at home. The idea of the projects is for students to explore different aspects of science outside of the curriculum and after Easter, students will be given the opportunity to share these projects with other students in a cluster of UL schools via a virtual platform.

The projects will be uploaded on SMHW but even if your son-daughter does not wish to complete a project, the link below will take you to the Steve Spangler website where you will find lots of fun and some very interesting science experiments that can be done with everyday items found at home.

From all in the science department please have a wonderful Easter holiday and stay safe.
